

Commercial Aquatherapy

“ I recommend AquasureUK, because of their fantastic service and the way they maintain our chlorine-free pool. ”

Bob Killelea
Managing Director of James Killelea & Co Ltd.

Working in the commercial sector to provide a range of specialist products from tiled Hydro Spas to medical rehabilitation pools.

Bespoke Aquatherapy Pools Design and Build Service by Aquasure UK

“ Aquasure UK designed and installed our chiller pool and building. It has been a great aid to our physiotherapy department. Thanks to Aquasure UK. ”

Paul Kenyon
Technical Manager, Manchester City F.C.

Aquasure UK work with the client and their consultants from conception to completion. This enables a Hydrotherapy pool to be specifically designed to the client's exact requirement.

Alternative Therapy

Aquasure UK provide a wide range of alternative therapy equipment, including sauna, steam, automatic dry massage beds and heated solid stone therapy loungers.

Sanosil® Pool Chlorine-free Water Treatment for every Swimming Pool

Sanosil® Pool has the following important properties:

- Sanosil® Pool reliably kills all pathogens and all kinds of algae in swimming pool water. It completely satisfies the criteria of the international guidelines for swimming pool water according to DIN, SIA, KOK.
- Sanosil® Pool can be used for swimming pool water and for surface disinfection. Showers, swimming pool surroundings, changing rooms, saunas, solaria, deck chairs, etc. can easily and effectively be disinfected with a diluted Sanosil® Pool solution. Sanosil® Pool can also be used for prophylaxis against athlete's foot
- Sanosil® Pool is free of halogens (chlorine, bromine or iodine), i.e. the side effects caused by these products do not apply at all.
- Sanosil® Pool does not cause any irritation of skin, eyes or mucous membranes and, after swimming, there will be no characteristic odour on skin or clothes. Sanosil® Pool does not react with the urea (urine) that is always present in swimming pool water. Thus, there is no formation of chloramines, which are known to cause irritation of eyes, skin and respiratory tract.
- Sanosil® Pool is neither carcinogenic nor mutagenic. Biological, virological and toxicological reports, established by well-known international institutes on the basis of international standards such as DGHM, AFNOR, etc., are available on request.
- Sanosil® Pool does not contain any chlorine, i.e. there is no risk of formation of the carcinogenic chloroform.
- The quantity of pH regulator to be added can be kept at a minimum, compared for example to the use of sodium hypochlorite.
- Sanosil® Pool mainly breaks down into water and oxygen. Air-condition and ventilation installations in indoor pools can be operated with far smaller amounts of fresh and circulating air, thus saving on energy costs.
- Measurement of concentration and dosage can be done manually or by means of specific equipment. See our range of measuring and control equipment.
- Sanosil® Pool can, without any restrictions, also be used in salty water (e.g. Samadhi pools) or thermal baths with a high content of organic matter.

Maintenance and Risk Analysis

Aquasure UK provide:

- Planned maintenance and service of all Hydrotherapy products ranging from individual domestic pools to commercial Aquatherapy centres.
- Full risk assessments
- 24 hour helpline

Sport Aquatherapy, Rehabilitation and Cryotherapy Products

“ The service and expertise shown by Aquasure UK, when they installed my Domo Sauna and plunge pool, was superb. I highly recommend them. ”
